

COVER LETTER

To: Hiring Committee & Technical Leadership

Target Role: Senior AI / Machine Learning Engineer - Core Intelligence

Company: Google

Dear Hiring Team at Google,

I am writing to express my strong enthusiasm for the **Senior AI / Machine Learning Engineer - Core Intelligence** position at Google. Having closely followed Google's pioneering developments in Gemini models, next-generation agentic workflows, and efficient AI infrastructure, I am eager to bring my 6+ years of experience in Deep Learning, PyTorch, RAG architectures, and model optimization to your team.

At Apex Intelligence Labs, I architected and deployed production-grade Agentic LLM pipelines using PyTorch, FastAPI, and ChromaDB, serving over 5,000 requests per second with sub-45ms latency and driving a 68% reduction in resolution times. Furthermore, my research background at Stanford University - where I received the Outstanding Master's Thesis Award and published at NeurIPS and ACL workshops - has equipped me with both the theoretical depth and empirical rigor required for Google's engineering standard.

Specifically, my open-source work on **EdgeQuant** (reducing Transformer VRAM footprint by 62% via 4-bit/8-bit quantization) and my hackathon-winning **Baki Agentic Assistant** directly reflect the challenges outlined in your job description.

I am thrilled by the prospect of contributing to Google's mission to organize the world's information with cutting-edge AI. Thank you for your time and consideration.

Sincerely,

Dr. Alex Morgan
