

STATEMENT OF MOTIVATION & CAREER PURPOSE

Candidate: Dr. Alex Morgan

Target Organization: Google

Opportunity: Senior AI / Machine Learning Engineer - Core Intelligence

Why Google?

Google represents the pinnacle of artificial intelligence research and global infrastructure scalability. Joining the Core Intelligence team aligns seamlessly with my overarching career vision: to build reliable, high-throughput intelligent systems that improve human productivity on a global scale.

Technical Alignment & Personal Drive

Throughout my career, I have refused to treat AI models as black boxes. Whether fine-tuning LLMs via LoRA/QLoRA at Apex Intelligence Labs or developing custom quantization kernels in C++ for EdgeQuant, my drive stems from understanding and optimizing every layer of the compute stack.

Future Outlook

At Google, I aim to collaborate with world-class researchers and systems engineers to push the boundaries of RAG retrieval efficiency, multi-agent orchestration, and hardware-accelerated model inference.
