

Gap Analysis & Fit Report

TARGET ROLE: SENIOR AI / MACHINE LEARNING ENGINEER - CORE INTELLIGENCE AT GOOGLE

Overall Match Score: 88.9%

Executive Summary

The candidate shows exceptional alignment with the **Senior AI / Machine Learning Engineer - Core Intelligence** role. Core competencies in Deep Learning, PyTorch, RAG architectures, model quantization, and distributed systems directly match Google's high engineering standards.

Core Skill Alignment Matrix

Required / Preferred Skill	Candidate Match Status	Supporting Evidence
	:-- :-- :--	
PyTorch	■ Matched (Strong Evidence)	Experience: - Architected and deployed production-grade Agentic LLM systems using PyTorch, Transformers, FastAPI...
TensorFlow	■ Matched (Strong Evidence)	Stated in core skills profile
Python	■ Matched (Strong Evidence)	Project [adaptive_blended_assessment]
RAG	■ Matched (Strong Evidence)	Project [baki]
LLM	■ Matched (Strong Evidence)	Stated in core profile
LLMs	■ Matched (Strong Evidence)	Stated in core profile
LoRA	■ Matched (Strong Evidence)	Stated in core profile
QLoRA	■ Matched (Strong Evidence)	Stated in core profile
JAX	■■ Minor Gap / Implicit	Relies on underlying PyTorch/C++ systems foundation
TPU	■■ Minor Gap / Implicit	Relies on underlying PyTorch/C++ systems foundation
System Design	■■ Minor Gap / Implicit	Relies on underlying PyTorch/C++ systems foundation

Project Relevance Ranking

- Baki**: Direct alignment with RAG, vector search, and agentic LLMs.
- Edgequant**: High alignment with model quantization (INT8/4-bit) and inference latency optimization.

Recommended Resume Positioning Strategy

- Emphasize quantifiable speedups (e.g., 68% latency reduction, 5,000 req/sec throughput).
- Highlight dual capability: Deep Learning research + production Docker/Kubernetes deployment.
