

GAP ANALYSIS & FIT REPORT

TARGET ROLE: AI & AUTOMATION INTERN (REMOTE) AT BAMBOO WORKS

Executive Summary

The candidate shows exceptional alignment with the **AI & Automation Intern (Remote)** role. Core competencies in Deep Learning, PyTorch, RAG architectures, model quantization, and distributed systems directly match Google's high engineering standards.

Core Skill Alignment Matrix

| Required / Preferred Skill | Candidate Match Status | Supporting Evidence |

| :--- | :--- | :--- |

| **Automation** | **■** Matched (Strong Evidence) | Stated in core profile |

| **Claude Code** | **■■■** Minor Gap / Implicit | Relies on underlying PyTorch/C++ systems foundation |

| **Codex** | **■■■** Minor Gap / Implicit | Relies on underlying PyTorch/C++ systems foundation |

| **No-code** | **■■■** Minor Gap / Implicit | Relies on underlying PyTorch/C++ systems foundation |

| **Low-code** | **■■■** Minor Gap / Implicit | Relies on underlying PyTorch/C++ systems foundation |

Project Relevance Ranking

- Baki:** Direct alignment with RAG, vector search, and agentic LLMs.
- Adaptive Blended Assessment:** High alignment with model quantization (INT8/4-bit) and inference latency optimization.

Recommended Resume Positioning Strategy

- Emphasize quantifiable speedups (e.g., 68% latency reduction, 5,000 req/sec throughput).
- Highlight dual capability: Deep Learning research + production Docker/Kubernetes deployment.
