Internship Selection Committee
Qatar Media Corporation (QMC)
Doha, Qatar (Remote Internship Application)

SUBJECT: Application for Artificial Intelligence & Digital Transformation Internship (Feb – Jul 2027)

Dear Members of the Selection Committee,

I am writing to express my enthusiastic interest in the **Artificial Intelligence & Digital Transformation Internship** at Qatar Media Corporation (QMC). As QMC leads digital media transformation and regional broadcasting innovation, integrating intelligent AI solutions into modern media workflows represents a pivotal step in expanding Arabic-language digital reach and content intelligence.

My background addresses QMC's focus on "intelligent content systems" and "NLP for media." Through **News-Bot**, an AI-powered news chatbot built on Google Gemini 1.5 Flash API and Express.js, I engineered automated news summarization, fact-checking assistance, and category-based NLP analysis across 8 media domains. Additionally, I integrated content recommendation and topic-filtering mechanisms into the system, demonstrating how large language models can streamline newsroom curation and content discovery.

Beyond NLP, my work demonstrates breadth in data science, recommendation algorithms, and production data pipelines. Through **Wanderlust AI**, I built an AI recommendation engine integrating Google Gemini API and YouTube Data API for multi-source media aggregation, while my **WriteLens V2** platform deployed 3-tier AI analytics pipelines across 88 production runs with privacy-first data tokenization. I also built **EcoSentinel AI**, a bilingual Arabic/French environmental monitoring dashboard powered by classical ML (SVM), reflecting the kind of multilingual, data-driven interface work relevant to QMC's diverse audience.

I am available for the full internship duration from **February to July 2027** in a remote format, bringing native Arabic fluency and B2-level English communication. These experiences directly align with QMC's stated objectives of applying AI techniques to real-world media challenges, exploring NLP and automation in media environments, and building intelligent content systems. I would welcome the opportunity to discuss how my technical background can support Qatar Media Corporation's digital transformation initiatives.

Sincerely,

Benouali Abdelkader Yahia Zakaria

Master's Student in Artificial Intelligence & Cybersecurity
University Ain Temouchent Belhadj Bouchaib, Algeria
